

In our pre-registration, we specified that we had a 3 (Pose: happy, anger, neutral) x 3 (Demand: positive demand aware, negative demand aware, demand unaware) mixed design. Since participants posed each expression twice, the design was more precisely a 3 (Pose: happy, anger, neutral) x 2 (Block: first or second) x 3 (Demand: positive demand aware, negative demand aware, demand unaware) mixed design. Inferences are the same if the block factor is dropped.
